

April 2025 HARRISCO Academic Writing Workshop

Free Lecture, Korean Subtitle Available

HARRISCO

Writing Scientifically

Enhance your research by communicating with clarity, precision, and simplicity.

Introduction

In this workshop, we will be introducing you to the key components to write a scientific research paper suitable for publication in peer-reviewed journals. We will cover the writing mechanics of the overall outline and organization of the information to be included in your research paper. In addition, we will help you to understand how your paper can be crafted by using sources not just for citations, but also as a tool that provides context and helps elucidate the relevance of your own research. The course will include key elements of word choice and grammar that are common throughout academic writing, especially for researchers for whom English is a second language. Finally, we will help you to craft impactful conclusions to your paper that not just summarize the key points in the paper, but also provide a strong basis of the future research directions for your own research as well as that of your peers.

Details

Workshops will be delivered online via Zoom (Video Lecture)
